

WALES WELCOMES VERTICAL FARMING

Wales being part of the UK, offers a robust, business-friendly environment for Vertical Farming operators to invest and develop their business for the UK and global markets.

Wales has a strong supply chain for Vertical Farming operations, including but is not limited to R&D, system development, equipment design, LED lighting, renewable energy, as well as university graduates majoring in Controlled Environment Agriculture/Horticulture.

Development land parcels in premier locations in Wales and excellent road links provide ready access to a population of 10-20 million people within a radius of 100 miles, making Wales an ideal location for CEA/Vertical Farming productions.

Key public, private and academic organisations in Wales are working together to support, develop and grow the Vertical Farming sector in Wales.
